QuikFil Instructions

CLJCP1215 qf3.1

Canon 1977B001 1978B001 1979B001 1980B001
Canon 6269B001 6270B001 6271B001 6273B001
HP CB540A/41A/42A/43A, CE320A/21A/22A/23A
HP CF210A/10X/11A/12A/13A

1) Use our Universal Hole Tool or other melting device to make a 3/4 inch fill hole in the location shown. Do not allow any small bits of plastic to fall into the cartridge. If using our hole tool, read the operating instructions that came with it.

IMPORTANT: When making the fill hole, you may find it easier to cut off part of the label so you don't have to go through it. Also, If refilling a starter cartridge that came with the printer, check the fill hole you make closely. There may be a secondary inner wall you have to melt through to get to the toner chamber. If so, please contact us for additional instructions.

2) Shake the toner bottle well to aerate and loosen the toner. Then remove the cap and install the pouring spout. Slowly pour in the whole bottle of new toner. Try to avoid squeezing the bottle as it may cause toner to blow out all over the cartridge.

3) Once refilling is complete, clean the area around the fill hole and seal it with a two inch piece of the foil tape that came with the kit. Smooth the tape out well to make a leak proof seal.

4) Chip replacement: Use a utility knife to make a slice in each rail where shown so the chip can pass through. Then slide the old chip out and slide the new chip in. CAUTION - All chips are static sensitive and can be damaged if subjected to a static discharge.

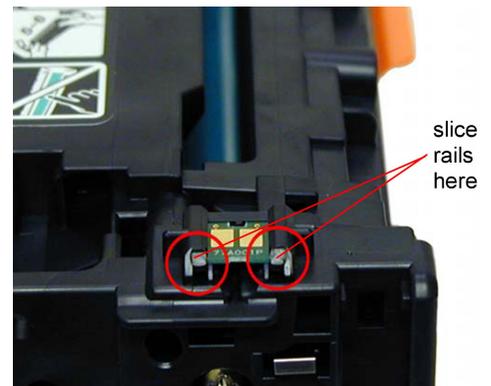

5) Shake the cartridge side to side to level the toner. Then reinstall it in the machine and run some test prints.

Note: If not replacing the chip, make sure the printer's supply override function is turned on in the printer settings so the printer will continue to print even though the chip has not been replaced.

3/4" hole cutter tip
